

Freedom to Breathe

Because asthma management is more than just measuring peak flow, we have put together an entire tote bag filled with all the necessities to monitor and effectively deliver your asthma medication. Our Pocket Chamber and Panda Mask work hand-in-hand with most every Metered Dose Inhaler.

Our PiKo-the-Penguin Asthma Management Kit is available to both Patients and Physicians through our website: www.treat-asthma.com, or by calling us directly at 800.574.7374.

Providing the Freedom to Breathe for all ages.

640-115: Large (Adult) (Green Valve) (Box of 10)

PiKo-the-Penguin Asthma Management for Kids

PiKo-the-Penguin was created to ease children into the world of asthma management. Soft and soothing, the PiKo-the-Penguin plush toy holds in his backpack your child's PiKo-1 Electronic Peak Flow / FEV1 meter. PiKo-1 is a simple asthma-monitoring tool, yet it is also the most accurate and advanced. With PiKo-1 your child will be able to test their peak flow and FEV1 measurements daily, capturing only the most accurate data. Since PiKo-1 stores 96 tests in its memory bank, your child will not have to do any manual tracking of data, simply bring your PiKo-1 to your physician's office and he can view the results. For those patients and/or physicians who would prefer a printout, PiKoNET™ trending software is available.

Our PiKo-the-Penguin Asthma Management Kit also includes an interactive activity booklet the help children learn about asthma and its various triggers. Through fun games your child will quickly learn 'asthma lingo' and become aware of different asthma triggers and how monitoring their asthma can help prevent an asthma attack.
